Annotations expedites approvals and improves speed to market through shorter review cycles and enhanced workflow performance.

Simplify participation, enhance team collaboration and speed the review process through centralized mark-up and annotations directly with the DAM. Enable creators and project managers to comment and discuss changes in line with other stakeholders for a 360-degree view of progress and proposed revisions.

A single source of truth for all your assets:

Centralize feedback and reviews
Conduct reviews in a unified digital location accessible by all stakeholders and those invested in proposed changes, revisions, and progress.

Apply standard mark-up from your browser
Add and share notes, free-form lines, and "stamp" a document with custom, searchable statuses, such as 'Approved.'

Easily search, edit and update existing feedback
Users can search annotations, zoom in for a closer view, relocate input, and make additional notes that display when a user's hovers over a comment.

Track comments in the original file
Push feedback directly to your creators as a separate layer in their original file. Feedback is displayed inline with changes so that there is no confusion.

ROLE-BASED ACCESS

Ⓧ xinet | ANNOTATION FEATURES

› Simplifies the review cycle for anyone involved in asset or content development (clients, creators, project managers, etc.)

› Automatically jump and launch files from the UI

› View annotations directly within the working file

› Annotate files on a separate layer with no impact to the original file

› Comment and track annotations as they are implemented

› Swap text annotations for original text within the working document (InDesign only)

› Use colored text to identify specific users or groups

› Track which comments were made by which user

› Search text in annotations to locate specific feedback

› Plugins for Adobe Illustrator, Photoshop, and InDesign

› Mobile ready for review on the go
